COMPUTER FUNDAMENTALS AND PROGRAMMING (BES 10a)

PORTFOLIO 5 STRINGS

ARAÑA, JANELE A.
BSChE-1A
STUDENT

ENGR. VINCENT CALIMLIM
PROFESSOR

Introduction

In Portfolio 5, I chose a daily life scenario that focuses on the concept of strings, lesson 6 in Computer Fundamentals and Programming. This involves food ordering systems specifically the monitor that can be seen in every fast-food chain and food delivery application. I design this because this can be used in daily life businesses. The program allows users to order food, calculate total expenses, process payments, and generate a simple receipt using basic coding concepts.

Design of the Program

JupyterLab Python 3 (pykernel)

#FoodOrderingSystemz

[3]: print("WELCOME TO EYEPANDA")
print(".....")

WELCOME TO EYEPANDA
.....

#MENU

[4]: Beeger=50
Friez=35
Melktea=79
Pezza=120

#DISPLAY MENU IN COUNTER

[6]: print("\nMENU")
print("1. Beeger-P50")
print("2. Friez-P35")
print("3. Melktea-P79")
print("4. Pezza-P120")

MENU
1. Beeger-P50
2. Friez-P35
3. Melktea-P79
4. Pezza-P120

#INPUT ORDERS

[17]: beeger_qty = int(input("How many Beeger/s?"))
friez_qty = int(input("How many Friez?"))
melktea_qty = int(input("How many Melktea?"))
pezza_qty = int(input("How many Pezza/s?"))

How many Beeger/s? 2
How many Friez? 2
How many Melktea? 2
How many Pezza/s? 2

#COMPUTE TOTALS

[24]: Beeger_total = Beeger*beeger_qty
Friez_total = Friez*friez_qty
Melktea_total = Melktea*melktea_qty
Pezza_total = Pezza*pezza_qty

grand_total = Beeger_total+Friez_total+Melktea_total+Pezza_total

#RECEIPT

[29]: print("-----RECEIPT-----")
print("Beeger:", beeger_qty, "x P50 =", Beeger_total)
print("Friez:", friez_qty, "x P35 =", Friez_total)
print("Melktea:", melktea_qty, "x P79 =", Melktea_total)
print("Pezza:", pezza_qty, "x P120 =", Pezza_total)

print("-----")
print("TOTAL AMOUNT: p", grand_total)

-----RECEIPT-----
Beeger: 2 x P50 = 100
Friez: 2 x P35 = 70
Melktea: 2 x P79 = 158
Pezza: 2 x P120 = 240
-----
TOTAL AMOUNT: p 568

#PAYMENT

[35]: payment = int(input("ENTER PAYMENT AMOUNT: p"))

ENTER PAYMENT AMOUNT: p 1000

#CHANGE

[36]: change = payment - grand_total
print("Change: p", change)
print("THANK YOU COME & COME AGAIN")

Change: P 432
THANK YOU COME & COME AGAIN
```

Figure 1. Menu and Monitor Display Menu

Beeger for Burger

Friez for Fries

Melktea for Milk Tea

Pezza for Pizza

```
#FoodOrderingSystemz

[3]: print("WELCOME TO EYEPANDA")
      print(".....")

      WELCOME TO EYEPANDA
      .....

      #MENU

[4]: Beeger=50
      Friez=35
      Melktea=79
      Pezza=120

      #DISPLAY MENU IN COUNTER

[6]: print("\nMENU")
      print("1. Beeger-P50")
      print("2. Friez-P35")
      print("3. Melktea-P79")
      print("4. Pezza-P120")

      MENU
      1. Beeger-P50
      2. Friez-P35
      3. Melktea-P79
      4. Pezza-P120
```

Figure 2. Input Orders and Calculation Codes

I ordered for 2 persons

```
#INPUT ORDERS

[17]: beeger_qty = int(input("How many Beeger/s? "))
      friez_qty = int(input("How many Friez? "))
      melktea_qty = int(input("How many Melktea? "))
      pezza_qty = int(input("How many Pezza/s? "))

      How many Beeger/s? 2
      How many Friez? 2
      How many Melktea? 2
      How many Pezza/s? 2

      #COMPUTE TOTALS

[24]: Beeger_total = Beeger*beeger_qty
      Friez_total = Friez*friez_qty
      Melktea_total = Melktea*melktea_qty
      Pezza_total = Pezza*pezza_qty

      grand_total = Beeger_total+Friez_total+Melktea_total+Pezza_total
```

Figure 3. Receipt, Payment, and Change
Got the total the amount, pay it, and I received my change.

```
#RECEIPT

[29]: print("-----RECEIPT-----")
      print("Beeger:", beeger_qty, "x P50 =", Beeger_total)
      print("Friez:", friez_qty, "x P35 =", Friez_total)
      print("Melktea:", melktea_qty, "x P79 =", Melktea_total)
      print("Pezza:", pezza_qty, "x P120 =", Pezza_total)

      print("-----")
      print("TOTAL AMOUNT: p", grand_total)

      -----RECEIPT-----
      Beeger: 2 x P50 = 100
      Friez: 2 x P35 = 70
      Melktea: 2 x P79 + 158
      Pezza: 2 x P120 + 240
      -----
      TOTAL AMOUNT: p 568

#PAYMENT

[35]: payment = int(input("ENTER PAYMENT AMOUNT: p"))
      ENTER PAYMENT AMOUNT: p 1000

#CHANGE

[36]: change = payment - grand_total
      print("Change: P", change)
      print("THANK YOU COME & COME AGAIN")

      Change: P 432
      THANK YOU COME & COME AGAIN
```

Figure 4.
This is where my errors appear in the process of coding in Jupyter. You should be careful and not squint because this is one of the things that causes errors in coding.

```
[8]: beeger_qty = int(input("How many Beeger/s?"))
      friez_qty = int(input("How many Friez?"))
      melktea_qty = int(input("How many Melktea?"))
      pezza_qty = int(input("How many Pezza/s?"))

      How many Beeger/s? 2
      How many Friez? 2
      How many Melktea? 2
      How many Pezza/s? 2

#COMPUTE TOTALS

```

I chose to do this because I love ordering fast food and getting it delivered, so I was curious about how the technological monitors they use to receive orders work.
